

Dmitry Gladkih

Software Engineer | C++ / Python | Computer Vision & Backend

dmitriy.g.a.2000@gmail.com | [LinkedIn](#) | [GitHub](#) | [gladkih.xyz](#) | Telegram: @Midnight_Fruit
Novosibirsk, Russia | Remote / Hybrid | Open to international relocation | English: B2

PROFILE

Software Engineer with 3 years of commercial experience in C++ and Python, focused on computer vision, industrial measurement software, and backend services. Hands-on experience with camera SDK integration, multi-camera acquisition, real-time image processing, REST APIs, GUI development, Docker, and CI/CD.

CORE SKILLS

Languages: C++, Python

Computer Vision: OpenCV, OpenCL, ArUco, image processing, camera calibration

Backend: FastAPI, Django, DRF, PostgreSQL, SQLAlchemy, Redis, Celery

Desktop / Systems: PySide6, multiprocessing, UDP, Linux

Infrastructure / Tools: Docker, nginx, GitLab CI/CD, Tailscale, Headscale, Git, pytest, Sphinx

EXPERIENCE

Aviaspetstest - Software Engineer | Dec 2023 - Present | Novosibirsk, Russia

- **Industrial camera-control platform.** Designed a shared data-acquisition layer that exposes multiple camera SDKs through one interface. Implemented synchronized multi-camera capture in separate processes and separated the core from GUI and REST API layers. The platform is used by several measurement applications.
- **Vibration analysis system.** Developed contactless video-based measurement of oscillation amplitude and frequency: up to 80 measurements/sec per marker and up to 7 markers tracked simultaneously. Implemented ArUco detection, calculations, UDP communication with a single-board computer, and live visualization.
- **Deformation measurement system (stereo-DIC).** Implemented C++/OpenCV components for target detection, camera calibration, and point matching between frames. The workflow processes 25 MP images.
- **Drawing digitization and angle measurement.** Developed two measurement applications on the shared camera platform using OpenCV and SQLAlchemy.

SELECTED PROJECTS

- **Voxbot - transcription service (AI-assisted development).** Defined the architecture and requirements, reviewed AI-generated changes, integrated services, deployed the stack, and debugged production issues. Python, aiogram, Redis, Celery, faster-whisper, PostgreSQL, Docker, self-hosted Telegram Bot API, LLM post-processing.
- **CRM for a family business.** Django/PostgreSQL application used in production and deployed to a VPS through a self-hosted GitLab Runner and CI/CD pipeline.
- **Self-hosted infrastructure.** Maintain GitLab CE, CI/CD pipelines, Tailscale/Headscale networking, reverse proxying, server deployments, and automated backups.

EDUCATION

Siberian State University of Geosystems and Technologies (SSUGT) - BSc in Geodesy and Remote Sensing, 2023

Additional training: Python Developer - Skypro, 2024 | C++ Developer - GeekBrains, 2022
