Novosibirsk, Russia | Remote / Hybrid | Open to international relocation | English: B2

---

### PROFILE

Software Engineer with around 3 years of commercial experience in C++ and Python engineering software. Built and operated Python backend systems with FastAPI, Django, PostgreSQL, SQLAlchemy, Redis, and Celery. Integrated REST APIs with engineering applications and handled Docker deployment, CI/CD, and production troubleshooting.

### CORE SKILLS

**Languages:** Python, C++

**Backend:** FastAPI, Django, DRF, PostgreSQL, SQLAlchemy, Redis, Celery, REST APIs

**Infrastructure:** Linux, Docker, nginx, GitLab CI/CD

**Testing / Tools:** Git, pytest

**Engineering / Computer Vision:** OpenCV, PySide6, Boost, Eigen

### EXPERIENCE

**Aviaspetstest - Software Engineer** | Dec 2023 - Present | Novosibirsk, Russia

- **Industrial camera-control platform.** Designed a C++/Python core that integrates multiple camera SDKs through one interface. Implemented synchronized multi-camera acquisition with multiprocessing and separated the core from PySide6 GUI and REST API access. The platform is used by several measurement applications.
- **Vibration analysis system.** Developed real-time ArUco-based measurement and UDP communication with a single-board computer. The system processes up to 80 measurements/sec per marker and tracks up to 7 markers simultaneously.
- **Deformation measurement system (stereo-DIC).** Implemented C++/OpenCV components for target recognition, camera calibration, and point matching on 25 MP images.
- **Other measurement systems.** Developed drawing-digitization and angle-measurement applications on the shared camera platform using OpenCV and SQLAlchemy.

### SELECTED PROJECTS

- **Voxbot - transcription service.** Application code was produced with AI coding tools. Defined requirements and architecture, reviewed generated code, integrated and tested services, and handled deployment and production operation. Stack: Python, aiogram, Redis, Celery, faster-whisper, PostgreSQL, Docker, self-hosted Telegram Bot API, LLM post-processing.
- **CRM for a family business.** Django/PostgreSQL application used in production and deployed to a VPS through a self-hosted GitLab Runner and CI/CD pipeline.
- **Self-hosted infrastructure.** Maintain GitLab CE, Docker, CI/CD, nginx, Tailscale/Headscale networking, deployments, and automated backups.

### EDUCATION

**Siberian State University of Geosystems and Technologies (SSUGT)** - BSc in Geodesy and Remote Sensing, 2023

**Additional training:** Python Developer - Skypro, 2024 | C++ Developer - GeekBrains, 2022
